

[NAME OF DOCUMENT] ABSTRACT

[ABSTRACT]

[PROBLEM]

5 Good receiving characteristics are achieved by
receiving a path immediately after the path appears.

[MEANS FOR SOLVING]

10 A path timing comparing section 3 compares correlation
peak values and their path timings detected from a delay
profile 1 with correlation peak values and their path timings
assigned to fingers 5 in the previous cycle. If a path timing
determining section 4 determines from the comparison result
that a path with high intensity level has appeared, it
immediately assigns the path to a finger. This enables
maintaining good receiving characteristics.
